Collectable Catcher Quick Start Guide
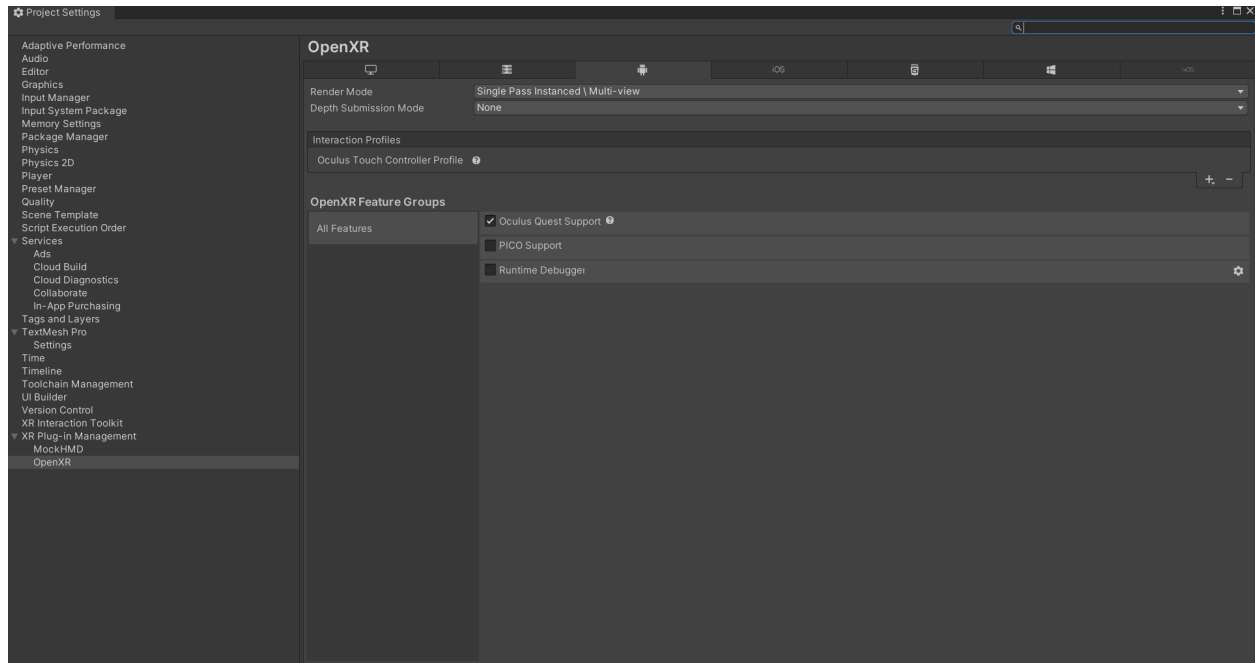

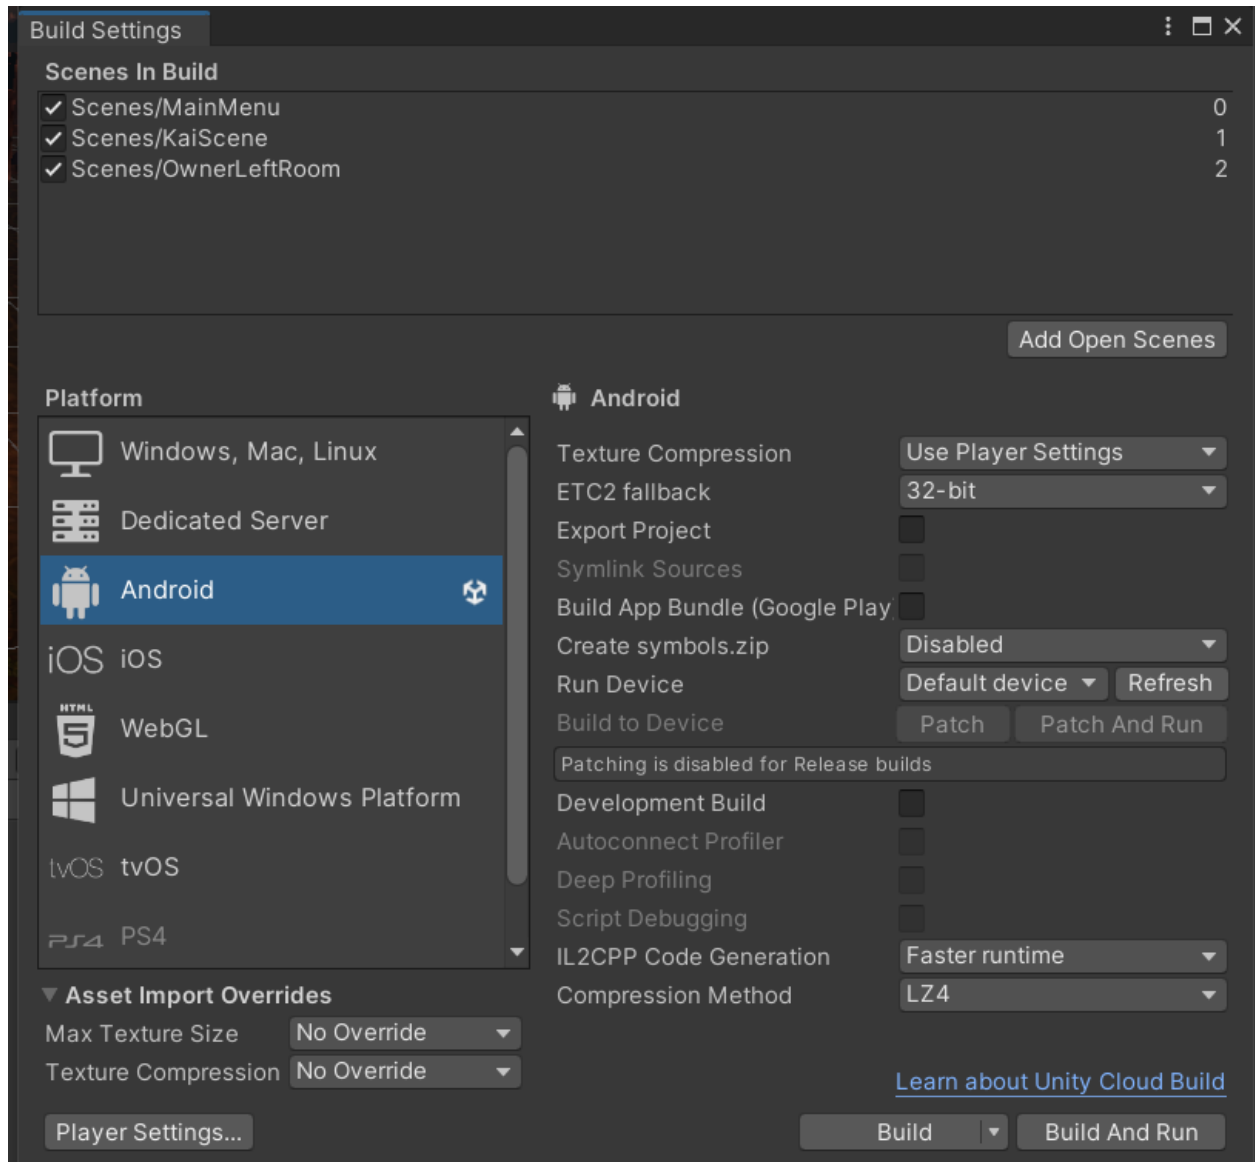

Hardware Requirements:
VR Ready Computer
Quest 2

1. Clone the git repository from https://github.com/ferreirakaike/Egg_Emergency_VR
2. Install Unity version 2021.3.11f1 & open the project with it
3. To run on Windows, ensure that you have the following build settings:
   a. Use CTRL + B to build and run the project

4. To build an apk and run natively in standalone mode on the Quest 2, go to Edit -> Project Settings -> XR Plug-in Management -> OpenXR
   a. Click over to Android tab
   b. Ensure that Oculus Touch Controller Profile is set in "Interaction Profiles"
   c. Ensure that Oculus Quest Support is checked under OpenXR Feature Groups

5. Go to File -> Build Settings, switch platform to Android
   a. Click Build, and an apk will be generated in your selected location

6. Download and Install SideQuest on your computer from https://sidequestvr.com/
7. Enable Developer Mode on your Quest 2 device.
8. Connect your Quest 2 to your computer via the link cable
9. Launch the SideQuest app and select "Install APK file from folder on computer" in the top right hand corner.
